

Employee Health

Assume all human blood, plasma, serum, body fluids (semen, saliva, breast milk, vaginal secretions and any fluid contaminated with blood) and tissues to be contaminated with Human Immunodeficiency Virus (HIV), Hepatitis virus, or bacteria such as *Staphylococcus* or *Streptococcus*.

Use aseptic technique. Thorough hand washing is essential after client contact, after handling blood and body fluids, after wearing gloves, and prior to exiting the work area.

Employees shall report all work related accidents, incidents, and unexplained illness to their supervisor and/or physician immediately.

The skin of the Body Tattoo/Body Piercing Operator shall be free of rash, any lesion or visible sign of infection.

Body Tattoo/Body Piercing operators will not perform any procedures if they have a fever or respiratory infection.
