

# Do's and Don't's of Cleaning Your Home During the COVID-19 Outbreak

Do:

Use gloves when cleaning and regularly wash any cloth materials around the house with hot water.

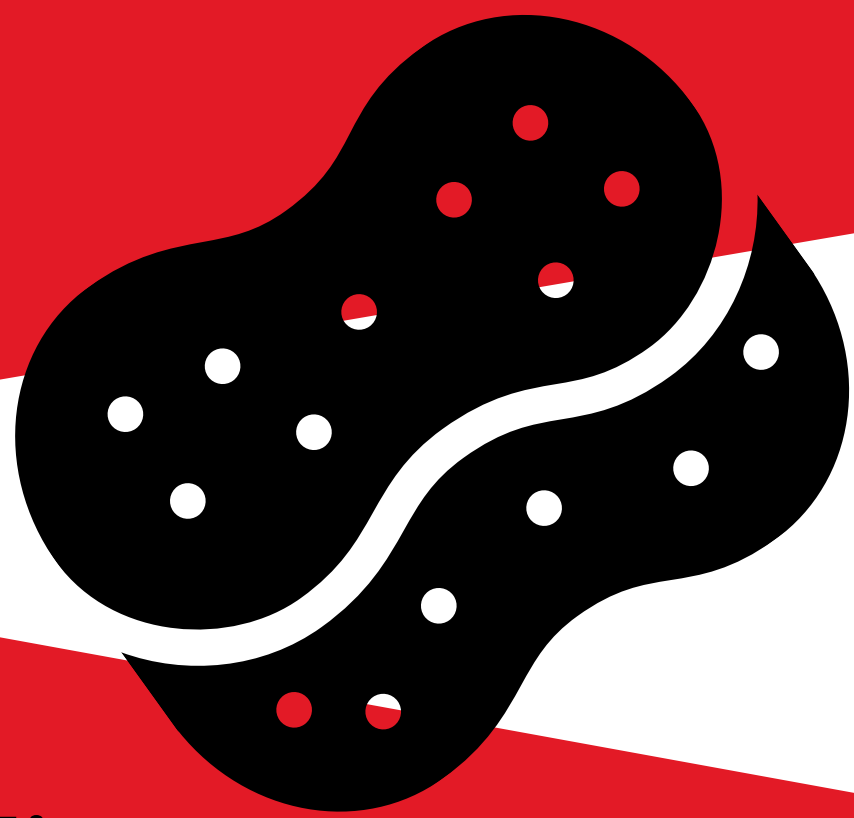

Don't:

Use vinegar or any other household alternative. These don't effectively kill the virus.

Do:

Clean electronics using at least 70% alcohol. Use a bleach solution of 5 tablespoons per gallon for everything else.

Don't:

Mix chemicals together when cleaning the same surface. Poisonous gases can form when mixing.
